

Introduction

This table details the minimum requirements for a Quality Assurance Project Plan (QAPP), a formal planning document which describes how environmental information operations are planned, implemented, documented, and assessed during the life cycle of a project. Per EPA, all elements and sub elements must be presented in your final QAPP and should not be deleted. If a section of the QAPP Template is not applicable to your specific project, indicate that the section is not applicable and include an explanation as to why the section is not applicable.

Element	Description	Notes & Hints
A	GROUP A ELEMENTS: Project Management and Information/Data Quality Objectives	Organizing and running project activities
A1	Title Page	
A2	Approval Page	
	Include, at a minimum: <ul style="list-style-type: none"> • Author and organization • Date prepared or revised • Approval signatures of key individuals, including EPA 	
A3	Table of Contents	
	Include, at a minimum: <ul style="list-style-type: none"> • Period of applicability • Revision / version control information • Grant number 	
A4	Project Purpose, Problem Definition, and Background	Describes the purpose of the project's Environment Information Operations (EIO) (e.g., research, monitoring, environmental technology, use of existing information).
	Include, at a minimum: <ul style="list-style-type: none"> • Project goals and objectives 	
A5	Project Task Description	Work to be performed and the work product to be produced
	Include, at a minimum: <ul style="list-style-type: none"> • Regulatory criteria or standards 	

Element	Description	Notes & Hints
A6	<p>Information/Data Quality Objectives and Performance/Acceptance Criteria</p>	<p>The Data Quality Objectives (DQO) process is used to establish the criteria that serve as the basis for designing a plan for collecting information/data of sufficient quality and quantity to support the goals of the project and achieve the stated outcomes. The seven (7) DQO steps guide the project team to plan for their project and meet their project goals.</p> <ol style="list-style-type: none"> 1. State the Problem 2. Identify the Study Goals 3. Identify Information Inputs 4. Define the Study Boundaries 5. Develop the Analytic Approach 6. Specify Performance and Acceptance Criteria 7. Develop Plan for Obtaining Data
	<p>Include, at a minimum:</p> <ul style="list-style-type: none"> • Information needs and sources • Study area and surroundings • History of study area • Summary of previous studies and existing data • Performance acceptance criteria • Targets for precision, accuracy (bias) and sensitivity • Targets for comparability, representativeness, and completeness • Acceptance criteria for quality of existing data • Model quality objectives 	
A7	<p>Distribution List</p>	<p>List of individuals receiving a copy of the approved QAPP and any subsequent revisions</p>
A8	<p>Project Organization</p>	<p>Identify the individuals and organizations participating in the project or EIO and describe their roles and responsibilities.</p>
A9	<p>Project Quality Assurance Manager (QAM) Independence</p>	<p>Describe how the project QAM's independence from EIO is ensured. For example:</p> <ul style="list-style-type: none"> • Establish Separate Reporting Lines: The QAM should report directly to senior management or an oversight body that is not involved in the day-to-day operations of the project. • Clearly Define Roles and Responsibilities: The QAM's duties should focus exclusively on quality assurance activities, such as auditing, oversight, and verifying compliance with the QAPP. These responsibilities should be explicitly separated from operational

Element	Description	Notes & Hints
		<p>tasks like data collection, analysis, or reporting.</p> <ul style="list-style-type: none"> • Conflict-of-Interest Policies: Implement policies that prohibit the QAM from participating in activities they are responsible for auditing or reviewing. • Independent Oversight Authority: Assign the QAM authority to oversee quality-related matters independently, with the ability to escalate concerns or discrepancies directly to decision-makers without interference from project operations personnel. • Regular Training and Documentation: Provide training to all team members emphasizing the QAM's independent role and the importance of adhering to quality assurance principles. Document this structure within the QAPP to ensure transparency and clarity.
A10	Project Organization Chart and Communications	Show lines of authority and lines of communication.
	<p>Include, at a minimum:</p> <ul style="list-style-type: none"> • Key individuals and their responsibilities • Describe communication procedures to EPA to include elevating discrepancies and QAPP non-conformances. 	<p>Describes the organization's project roles and responsibilities, including:</p> <ul style="list-style-type: none"> • Project manager • Project QAM • Individual responsible for QAPP management • Titles, roles, and names (if determined during planning) of operations and quality individuals within the organization conducting or supporting EIO and their reporting relationships
A11	Training and Certifications	Identify and describe any specialized training or certifications needed by personnel doing EIO. Include system to document training
A12	Documents and Records	Describes or references processes for management of documents and records, including the QAPP
B	GROUP B ELEMENTS - Implementing Environmental Information Operations	How you will collect and report data
B1	Identification of Project Environmental Information Operations	
B2	Methods for Environmental Information Acquisition	

Element	Description	Notes & Hints
	Field Activities Environmental Measurements	Describe field activities, Standard Operating Procedures (SOPs): <ul style="list-style-type: none"> • Collection, production, evaluation and/or use + design, construction, operation, or application of environmental technology • Sampling approach: methods, containers, preservation, holding times • Field parameters and lab analytes to be measured • Field log requirements: decontamination, sample ID, chain of custody • Modeling and analysis design, set up and data needs • Describe or reference SOPs
	Laboratory Analysis and Accreditation	<ul style="list-style-type: none"> • Identifies laboratory methods or SOPs by number, version/revision date, and regulatory citation • Where applicable, indicates modifications to the method or SOP
	Existing Information – intended use, suitability and acceptance criteria	Data obtained from databases, literature, software, websites and how it will be determined suitable
	Environmental Technology	<ul style="list-style-type: none"> • Identify whether the technology is primarily for pollution prevention, contamination containment, storage, or remediation. • Describe physical parameters or processes collected using environmental technologies, and specific systems, devices and components applicable to both hardware and methods or techniques that measure and/or remove pollutants or contaminants and/or prevent them from entering the environment.
B3	Integrity of Environmental Information	Describe or cite the procedures for ensuring the integrity of the environmental information operations.
B4	Quality Control	Complete a table of field and lab quality controls.
	Include, at a minimum: <ul style="list-style-type: none"> • Corrective action processes and determination of effectiveness • For existing data: systematic review, independent secondary review of literature studies, quality control of databases or spreadsheets • Model calibration and validation 	
B5	Instruments/ Equipment Calibration, Testing, Inspection and Maintenance	

Element	Description	Notes & Hints
B6	Inspection/Acceptance of Supplies and Services	
B7	Environmental Information Management	
	Include, at a minimum: <ul style="list-style-type: none"> • Controls for detecting and correction errors • Procedures to process, compile and analyze information • Required computer hardware/software 	
C	GROUP C ELEMENTS: Assessment and Oversight	Management of Data Generated
C1	Assessments and Response Actions	QAPP implemented as approved?
	Assessments	Assessment activities may include audits, performance evaluations, management reviews, peer reviews, inspections, surveillance, or readiness reviews, peer consultations, product reviews (e.g., data inspection, software testing, pre-dissemination reviews, or review of contractor deliverables).
	Response Actions	Describe how response actions associated with assessment findings, non-conformances, and corrective actions will be developed, documented and tracked to ensure completion.
C2	Oversight and Reports to Management	Identify the individual(s) responsible for oversight activities and describe management reports.
D	GROUP D ELEMENTS: Environmental Information Review and Usability Determination	How to Review and Interpret the Information
D1	Environmental Information Review	Describe or cite the procedures for the information/data verification and information/data validation activities and who will conduct these activities.
D2	Useability Determination	Qualitative and quantitative evaluation of the project type, quality and quantity to support its intended use
